Education

Queens College

BA, Computer Science

Queens, NY

Professional Experience

Whole Foods Market

In-Store Shopper

Manhattan, NY

Dec. 2025 – May 2026

- **Order Fulfillment:** Picked and packed grocery orders for in-store and delivery customers with high accuracy, meeting daily volume targets in a fast-paced environment.
- **Customer Service:** Assisted shoppers with locating products, resolved substitution issues on customer orders, and maintained clear communication to ensure satisfaction.

Panera Bread

Cashier

Queens, NY

Jul. 2024 – Dec. 2025

- **Order Accuracy:** Processed customer orders efficiently using Panera Bread's NCR RealPOS system, handling modifications, refunds, and discounts in compliance with company policies.
- **Team Coordination:** Collaborated with kitchen and delivery staff to resolve real-time issues, such as missing items or delivery delays, ensuring smooth operations.
- **Customer Service:** Managed high-volume customer inquiries during peak hours while maintaining composure and delivering consistent, high-quality service.

Personal Projects

RPG Text Based Game Development | Python, Git

- Designed a turn-based combat system with player leveling and skill progression
- Implemented procedural map generation for dynamic exploration.
- Built an inventory management and save/load system, using object serialization for persistence

Payroll System | Java, JDBC, TLS, NTFS ACLs

- Administered cross-platform deployment of a Java-based application server, diagnosing and resolving JDK/runtime version mismatches and build-tool configuration issues across Windows and macOS environments
- Configured secure remote access (TLS, encrypted tunnel) to a locally hosted web server, and implemented account security controls including password policies, login lockout, and rate limiting to prevent abuse
- Designed and tested a backup/restore process (verified via a full disaster-recovery drill) to protect sensitive payroll data against loss or corruption
- Implemented file-system-level access controls (Windows NTFS ACLs) restricting sensitive data files to the system owner, and built a tamper-evident audit log for tracking system activity

AI-Powered IT Support Desktop Application | Python, Tkinter, Anthropic Claude API, SQLite, PyInstaller

- Built a multi-provider AI support desktop app (Claude/DeepSeek/local Ollama) with real-time streaming responses, tool-use integration for live diagnostics (account lockouts, password resets, ticket lookups), and image-based troubleshooting via vision models
- Designed a multi-session ticketing system backed by SQLite, supporting parallel conversations, persistent history, and a built-in 14-article internal knowledge base referenced automatically via retrieval
- Implemented threaded, non-blocking API calls for a responsive UI during token-by-token streaming; packaged as a standalone Windows executable via PyInstaller for deployment to non-technical end users
- Added live web search augmentation (DuckDuckGo/Wikipedia) and markdown-rendered chat for accurate, up-to-date troubleshooting without requiring an API key

Technical Skills and Awards

Languages: Java, Python, C++

Developer Tools: Git, Google Cloud Platform, VS Code, Eclipse

Libraries: pandas, Apache Commons

Certifications

Google IT Support Professional Certificate – Google | Issued April 2026

Languages Spoken

English & Spanish
